Binaries

Linux

There is a Linux version at launchpad that can be used on Ubuntu and Debian based systems:

```
$ sudo apt-add-repository ppa:elmer-csc-ubuntu/elmer-csc-ppa
$ sudo apt-get update
$ sudo apt-get install elmerfem-csc
```

Windows

There is a nightly build for Windows both with and without mpi updated rather frequently at.

<https://sourceforge.net/projects/elmerfem/>

<http://www.nic.funet.fi/pub/sci/physics/elmer/bin/windows/>

Only 64-bit version is supported. Note that AMD there refers to the instruction set also applicable on Intel processors. When running the installer Windows may fail to run it and report “Windows protected your PC”. Then choose “More info” and “Run anyway”.

If you use the zip files, then you must manually set the environment variables. Search for “path” in your Windows system and choose “Edit environment variables for your account” and set “Variable” to “Value” as follows:

```
ELMER_HOME = c:\ElmerFEM-gui-nompi-Windows-AMD64
ELMERGUI_HOME = %ELMER_HOME%\share\ElmerGUI
ELMER_LIB = %ELMER_HOME%\share\elmersolver\lib
PATH = %PATH%;%ELMER_HOME%\bin;%ELMER_HOME%\lib
```

Virtual machine

There is a Linux Ubuntu based virtual machine (VM) for Oracle VirtualBox available at

<http://www.nic.funet.fi/pub/sci/physics/elmer/bin/VirtualMachines>

The VM is huge in size but provides a certified user experience. This is often used at courses to give not only a fresh Elmer version, but also a complete installation of related tools such as gmsh and Paraview.

Mac

There is no official Mac support. However, there are old recipes for homebrew that may help in the process.

<https://github.com/ElmerCSC/homebrew-elmerfem>
